To whom it may concern,

Acknowledging and Recognizing Interlligent's Training Program and Wireless industry support

Parallel wireless is a leading company in virtualized RAN solutions with innovative approach that changes the cellular networks world. Significant part of our product concentrates around our Radio and PHY performance which have direct and significant impact on system performance. Best in class product, requires well trained engineers with vast knowledge in RF, signal processing and HW design all together. Our technical staff composed in high diversity with junior to senior engineers. Amazing to note that most of our top ranked experts in the PHY and RF domains were participated and trained by Interlligent's "academy" for RF and signal processing courses. Similarly, our PHY algorithms team enjoyed an online course focused on signal processing in the MIMO world which gave the team deeper understanding and wider view for their daily work. We're highly appreciating Interlligent's "academy" and we aim to secure a yearly training budget for our team members. Our belief is that those trained engineers will reach higher heights in their work and will support spreading the knowledge across the Israeli's wireless industry.

With respect to the above, we also have excellent experience with other Interlligent's services and we're closely collaborating regarding lab equipment and technical know-how in this manner. This makes Interlligent to be a "one-stop-shop" for us regarding our training to hands-on daily work. With such comprehensive support and partnership, we see our efficiency grows and professionalism increased which directly results with better products for the benefits on the end-users.
